

Butt Roll Unwinder

The unwinder quickly, safely and automatically removes leftover roll material so cores can be reused and scrap material recycled.

The unwinder eliminates the heavy and hazardous task of manually removing the paper or film from the core using knives. The machine simply unwinds remaining material onto an upper tapered shaft so that the operator can easily remove it.

- ✚ The only unwinder in the market where it is possible to recycle butt rolls with different lengths and core diameters without making any adjustments on the machine.
- ✚ Simply place the butt roll in the cradle, pull the web around the upper shaft and start.
- ✚ Good return on investment in that separated film or paper can be recycled and the original cores reused.
- ✚ Cover/guard on top of the machine is well balanced and easy to open, designed to prevent starting of the machine if in the open position.
